

### REMARKS/ARGUMENTS

Applicants gratefully acknowledge the Advisory Action mailed March 30, 2006. Responsive to that Action, provided herewith is a Request for Continuing Examination.

Amended claim 1 is patentable over the cited art, as the cited art nowhere teaches or suggests a digital graphics bus including first and second TDMS links. Nor, as described in Applicants' Reply to Final Office Action (mailed March 9, 2006) does the cited art anywhere teach or suggest receiver and display in separate housings, in addition to the other defects of the cited art set forth in that Reply. With respect to the statement in the Advisory Action that the Examiner has not considered the Exhibit filed with the Reply to Final, it is respectfully noted that the Reply to Final uses this Exhibit to support or show that the prior art reference Tsukamoto does not teach a digital graphics bus or digital television display. *See* Reply to Final Office Action, p. 2. Support for the amendment to claim 1 is present in the specification, for example, on pages 6-8.

As to independent claims 11 and 29, the cited art fails to teach or suggest encryption of digital signals via a linear feedback shift register to provide different levels of encryption. For further discussion of this point, *see* Applicants' Reply to Final Office Action pages 3-4. Support for these claims exists in the Specification, for example, pages 12-14 describe use of a linear feedback shift register and changing of encryption levels.

For at least the same reasons as the claims from which they depend, the dependent claims are also patentable. Thus new dependent claims 37-43 are also patentable.

The application is believed to be in condition for allowance and the Examiner's prompt action in accordance therewith is respectfully requested. The Commissioner is authorized to charge any additional fees or credit any overpayment to Deposit Account No. 20-1504.

Respectfully submitted,

Date: \_\_\_\_\_
